Part One Listening Comprehension

Directions: In this section, you will hear three mini talks, each of which will be read only once. While listening, read the questions and answers below, choose the correct answers from the choices given, and mark your answers on Answer Sheet One.

Now you have one minute to read Questions 1 to 3. (one minute pause)

Now listen to mini talk one, and answer Questions 1 to 3.

mini talk one.

Hello everyone. Here is information about the course registration process for the upcoming semester. Before you begin, have your student ID number ready. You must select a minimum of five courses; however, we strongly recommend consulting your academic advisor first for personalized guidance. Advisors' availability varies. For example, Professor Smith is available Tuesdays and Thursdays, from 2:00 to 4:00 PM. Schedule an appointment through the online portal or contact Student Services directly.

Some courses require special registration procedures. For example, Advanced Laboratory Research in Biology requires written permission from the laboratory coordinator before registration. This is to ensure proper supervision and safety.

The registration deadline is June 2nd. Once you've chosen your courses and obtained any required approvals, complete registration at the Student Services office or via the online portal.

If you have questions or need assistance, please ask—we're here to help.

Now you have one minute to read Questions 4 to 6. (one minute pause)

Now listen to Mini talk Two, and answer Questions 4 to 6.

Mini talk Two.

I'm sure you realize that your research papers are due in six weeks. By now, I've looked at your proposed topics and made comments about them. The most frequent problem was proposing too broad a topic. Remember, this is only a ten-page paper.

As I return your topic proposals, I'd like to go over the schedule that outlines what we'll do during the next two weeks. Today is Monday, and I want you to submit your preliminary outline on Friday. Please be sure to incorporate the suggestions I've made on your topics into your outlines.

However, I wanted to let you know that I'll be attending a solar energy conference next week. I'll be away for three days and unable to hold our regular class. To make up for this, we will have a makeup class on June 21st. Please make sure to mark this date on your calendars and be prepared to attend, as we will look at the progress in nuclear energy. We'll examine the latest technological advancements, including new reactor designs and improved safety features, and consider the future role of nuclear power in our energy landscape.

Now you have one minute to read Questions 7 to 10. (one minute pause)

Now listen to Mini talk Three, and answer Questions 7 to 10.

Mini talk Three.

Have you heard of Fred Fruits? Fred Fruits look like apples but are smaller and redder. These fruits are sweet with a slightly sour taste, making them perfect for snacks, desserts, or juices. They originally come from Brazil, where they grow in warm, sunny areas. Now, you can often find them in Canada, too. Thanks to special greenhouse farming techniques, Canadian growers can now produce them year-round. But December is when they're at their sweetest.

Fred Fruits are very healthy. Some people believe these fruits can give you more energy and improve skin health. They are rich in vitamin C, which helps the immune system. However, some people may experience stomach problems after eating them. But fortunately, those problems often disappear after a few days.

Overall, Fred Fruits are a delicious and healthy choice, but it's best to eat them in moderation. And don't forget: wash your hands and the fruits before eating them.

This is the end of the Listening comprehension
