考号

中国科学院大学博士学位英语（英语 B）考试试卷

考 试 须 知

本次考试全部时间为 150 分钟，分为试卷一和试卷二两个部分。

试卷一

试卷一共 45 道题，答案写在机读答题卡(Answer Sheet One)上；

第 100 分钟时试卷一终了时间到，立即收机读答题卡，不另给填涂时间。

试卷二

答案写在主观答题卡（Answer Sheet Two）上的指定区域，写在其它纸上的无效。

机读答题卡填涂注意事项：

- 所有项目须用 2B 铅笔涂写。

- 在所选答案上划横线，左右长度顶到[　]的两个边，不得超出[　]。修改时请用橡皮涂擦干净，保持卷面整洁。
- 填写项目：姓名（用汉字填写）、学生考号（注意：与学号不同）。从左至右依次填写，以桌上座位条的考号为准，并在相应的数字上划横线。
- 凡不符合以上填涂标准，恕不另行人工阅卷。

主观答题卡填涂注意事项：

“考号”用铅笔填涂，其它部分请用签字笔。

PAPER ONE 试卷一

Part I Listening Comprehension

Directions: In this section, you will hear three mini talks, each of which will be read only once. While listening, read the questions and answers below, choose the correct answers from the choices given, and mark your answers on Answer Sheet One. Each question has only one correct answer. (10 questions, 15 points)

(Now you have one minute to read Questions 1 to 3)

Mini talk One

1. What is the minimum number of courses a student must select for the upcoming semester?

A. Three.

B. Four.

C. Five.

D. Six.

2. When is Professor Smith available for student appointments?

A. Tuesdays and Thursdays, 9:00–11:00 AM.

B. Tuesdays and Thursdays, 2:00–4:00 PM.

C. Tuesdays and Thursdays, 1:00–3:00 PM.

D. Tuesdays and Thursdays, 2:00–5:00 PM.

3. What special requirement is mentioned for the “Advanced Laboratory Research in Biology” course?

A. Written permission.

B. Submission of a research proposal.

C. Completion of a basic biology course.

D. Completion of laboratory safety training.

(Now you have one minute to read Questions 4 to 6)

Mini talk Two

4. According to the speaker, what was the most common problem with the students' writing?

A. Too broad a topic.

B. Lack of innovation.

C. Grammar.

D. Logic.

5. What should be submitted on Friday?

A. The first draft of the research papers.

B. The second draft of the research papers.

C. An outline.

D. A book report.

6. What is the speaker going to do on June 21st?

A. Attend a meeting on nuclear energy.

B. Attend a meeting on solar energy.

C. Teach a makeup lesson on nuclear energy.

D. Teach a makeup lesson on solar energy.

(Now you have one minute to read Questions 7 to 10)

Mini talk Three

7. Which characteristics distinguish Fred Fruits from ordinary apples?

A. Smaller size and redder color.

B. Smaller size and greener color.

C. Larger size and redder color.

D. Larger size and greener color.

8. Which country do Fred Fruits originally come from?

A. India.

B. Brazil.

C. Canada.

D. Thailand.

9. In which month are Fred Fruits at their sweetest?

A. Sept.

B. Oct.

C. Nov.

D. Dec.

10. How would Fred Fruits affect our health?

A. They may harm our skins but benefit our stomachs.

B. They may harm our stomachs but benefit our skins.

C. They may harm our skins and stomachs.

D. They may benefit our skins and stomachs.

Part II Reading

Section A

Directions: Read the following passages carefully and then select the best answer from among the four choices given to answer each of the questions or complete each of the statements that follow each passage. Mark the letter of your choice on Answer Sheet One. Each question has only one correct answer. (4 passages, 20 questions, 40 points)

Passage 1

In terms of lives lost and property destroyed, the Civil War was the most terrible armed conflict Americans have ever known, but that has not prevented them from remembering it with enduring fondness. The Civil War remains the most written-about period in American history, and it provides boundless entertainment in the United States and around the world. Instead of an object lesson in the dangers of political polarization, racial inequality, and human cruelty, fans consider their favorite war an exercise in nobility—a bloodbath that somehow forged the unbreakable bonds of American national identity.

Most Civil War historians were reared in this romantic tradition, and they have yet to fully free themselves from it. They still view the struggle through rose-colored glasses, making excuses for flawed heroes who have the reputations they never deserved. With the publication of *While in the Hands of the Enemy: Military Prisons of the Civil War*, Charles W. Sanders has distinguished himself as one of the few scholars capable of addressing the Civil War with utter frankness. His brilliantly

researched book is a ringing indictment of the prisoner-of-war (POW) systems maintained by both sides of that war, as well as the politicians and soldiers who deliberately sent thousands of men to needless suffering and death. There are no heroes in this study, just too many unnecessary victims.

Sanders sets his study in context by first tracing the evolution of POW policy during the American Revolution, War of 1812, and Mexican War. Americans knew that POWs were vulnerable to mistreatment, and the quickest way to improve their lot was to negotiate exchanges with the enemy. At the outset of the Civil War, neither side was prepared to cope with the many foes their armies captured, and prisoners inevitably suffered from inadequate housing, food, medical care, and other necessities. Abraham Lincoln delayed the implementation of general exchanges until July 1862 for fear it would allow rebellious southerners to claim de facto recognition of the Southern sovereignty. Once implemented, the exchange system quickly emptied prisons in the North and South, but it began breaking down by the end of the year.

11. Most Civil War historians would agree that the Civil War may have _____.

A. taught a useful lesson about human nature.

B. started political struggles in America.

C. raised the awareness of the race issue.

D. strengthened American national identity.

12. Civil War historians usually believe that “flawed heroes” should be _____.

A. forgiven.

B. criticized.

C. studied further.

D. evaluated objectively.

13. According to Charles W. Sanders, the Civil War _____.

A. created various heroes.

B. brought pointless misery.

C. started the first POW system.

D. was brutal but inevitable.

14. In the early days of the Civil War, _____.

A. the POWs were in difficult situations.

B. the number of the POWs was small.

C. the POW exchanges were frequent.

D. both sides used the POWs for political purposes.

15. What did Abraham Lincoln do to the POW exchange system?

A. He postponed implementing a broad exchange policy for a while.

B. He replaced prisoner exchanges with short-term agreements.

C. He authorized exchanges only after Southern prisons were filled.

D. He let the army decide prisoner exchanges on its own.

Passage 2

For centuries, the gravel and sand of Georges Bank and the great canyons, muddy basins, and shallow ledges of the Gulf of Maine have supported one of the world's

most productive fishing regions. But big boulders have historically protected a 1050-square-kilometer region at the bank's northeastern tip from dredging boats in search of scallops and trawlers hunting down groundfish. However, those boulders are becoming less of a deterrent against improved and sturdier gear. So when geologist Page Valentine of the U.S. Geological Survey in Woods Hole, Massachusetts, stood before his colleagues last month and defended his proposal to safeguard this rare, undisturbed gravel bed, he knew that he was also standing at the crossroads of science and politics.

Valentine's presentation was part of a 2-day workshop held at the New England Aquarium here to build support for Marine Protected Areas (MPAs), a controversial concept aimed at preserving biodiversity in coastal waters. The meeting, organized by Elliott Norse, founder of the Marine Conservation Biology Institute in Redmond, Washington, featured talks by 21 experts across a range of marine habitats and species and represented the marine community's biggest push for MPAs.

The discussion generated a map that nominated 29% of the ocean floor off the coast of New England and Canada's Maritime Province for protection, as well as 25% of pelagic (open-ocean) waters. The next step will come in the fall, when the scientists discuss the plan with government officials, commercial stakeholders, and environmental activists—meetings that are likely to be contentious. "The conservation groups will want to see if various species are covered. And various fishermen will be convinced that their livelihood is threatened," says Mike Pentony, an analyst for the New England Fishery Management Council, who was an observer at last month's workshop. The areas could be established by the National Marine Fisheries Service or under existing U.S. and Canadian laws to protect endangered species and habitats.

16. Which of the following can be the best title of the passage?

A. Fishery Industry in New England.

B. Plan to Protect Coastal waters of New England.

C. Restoration of Marine Life in the Gulf of Maine.

D. Problems Critical to Ecological Balance in Georges Bank.

17. The abundance of fish in the area has been a result of _____.

A. the perpetual fishery closure

B. the stringent ban on overfishing

C. the effective fishery management

D. its unique geographic features

18. Boulders used to be a deterrent to _____.

A. scallop

B. groundfish

C. fishing boats

D. improved gear

19. At the two-day workshop, the scientists reached an agreement on _____.

A. the marine areas to be preserved

B. how to rescue the endangered species

C. the guarantee of the fishermen's livelihood

D. what to discuss with the government officials

20. Which of the following CANNOT be concluded from the last paragraph?

A. The fishermen will be worried about their livelihood.

B. A decision is soon to be made on the protected areas.

C. Commercial stakeholders may be at odds with scientists.

D. Conflicting interests will arise between fishermen and scientists.

Passage 3

For nearly a millennium, the peaceful group known as the Taino flourished in present-day Cuba, the Virgin Islands, Puerto Rico, and numerous other islands in both the Lesser and Greater Antilles. However, less than 30 years after Columbus' three ships arrived at Hispaniola, the Taino faced destruction due to Spanish weaponry, forced labor, and diseases brought by Europeans. Unlike their distant relatives—the Inca, Aztecs, and Maya—the Taino did not leave behind pyramids or temples; there are no clear indications of their existence. The remnants of their culture are primarily found in a few Taino words that have persisted in modern English, such as *barbecue*, *canoe*, *hammock*, *hurricane*, and *tobacco*.

It is incorrect to believe—as many researchers have until recently—that the lack of numerous artifacts indicates that the Taino were less advanced than the more prominent civilizations of Central and South America. The Taino simply utilized materials that were not as long-lasting: they primarily used wood for construction and various crafts, and much of their creations have decayed over time. Nevertheless, thanks to two significant archaeological excavations conducted in the last two years, experts are greatly enhancing their understanding of the intricate society of the Taino and the complexity of their artifacts.

The first location, a Taino village located on the northern coast of Cuba and currently referred to as Los Buchillones, has been preserved from deterioration by a layer of clay found at the bottom of a shallow lagoon. In May of last year, a team consisting of Canadian and Cuban researchers uncovered the nearly intact remains of a Taino dwelling that had been buried in the sediment. They have since identified the foundations of up to 40 structures, which likely include a mix of communal buildings, auxiliary structures, and individual family homes.

In the depths of the forests of the Dominican Republic, at a location called La Aleta, a collaborative team from the U.S. and the Dominican Republic has made a potentially significant discovery: a Taino cenote, or ceremonial well, that reaches a depth of 240 feet. This well contains numerous artifacts that were offered as sacrifices and have been remarkably preserved due to the low oxygen levels in the water. Initial investigations of the nearby forest indicate that this well was likely part of a larger ceremonial complex that spanned at least 10 acres.

21. What led to the rapid decline of the Taino population after the arrival of Columbus?

A. Volcanic eruptions and natural disasters.

B. Mass emigration to other continents.

C. Internal conflicts and civil war among Taino tribes.

D. Spanish weaponry, forced labor, and European diseases.

22. According to the passage, what characteristic of the Taino civilization distinguishes those people from the Inca, Aztecs, and Maya?

A. Their advanced metallurgical skills.

B. Their extensive use of stone for construction.

C. The lack of monumental structures such as pyramids or temples.

D. Their complex written language.

23. Many scholars have underestimated the complexity of Taino society because the Taino _____.

A. were mobile and left no permanent settlements

B. primarily used materials like wood for their artifacts

C. intentionally destroyed their own cultural artifacts

D. refused to interact with other cultures, resulting in a lack of exchange

24. What significant discovery was made at Los Buchillones in Cuba?

A. A large collection of precious stones.

B. A complex system of irrigation canals.

C. The remains of a Taino village.

D. The ruins of a large stone pyramid.

25. What does the final paragraph mainly discuss?

A. A fortified hilltop used for defensive purposes.

B. A type of Taino canoe used for long-distance travel.

C. A ceremonial well where offerings were preserved.

D. A large communal cooking area used for feasts.

Passage 4

Things don’t come easily to Matteo, a 4-year-old New Yorker with brown bangs

and cowboy bandanna. Afflicted by cerebral palsy, he moves awkwardly. He thinks slowly and doesn't talk much. Small frustrations upset him terribly. But when Matteo visits Clive Robbins, his music therapist, he bangs gleefully on a snare drum, placing one hand on the rim to steady himself, he uses the other to rap in tempo to Robbins's improvised song. As the tune progresses, Matteo moves his act to the piano, banging along with one or two fingers and laughing excitedly. By following the rhythm, he is learning to balance his body and coordinate the movement of his limbs. He's also learning to communicate. "He is grown much more motivated and intent," says Robbins, the co-founder of New York University's Nordoff-Robbins Center for Music Therapy.

Disabled children aren't the only ones feeling the therapeutic power of music. A 79-year-old stroke survivor listens to Viennese waltzes on his headphones to help him to relearn to walk. A woman in labor had LeAnn Rimes' country tunes blaring from a stereo to help her keep in step with her contraction. And, yes, ostensibly healthy people are listening to airy New Age discs, and maybe lighting a candle or two, to lessen stress and promote well-being. They may all be on to something. Mounting evidence suggests that almost any musical stimulus, from Shostakovich to the Spice Girls can have therapeutic effects.

Music therapy isn't mainstream health care, but recent studies suggest it can have a wide range of benefits. In 1996, researchers at Colorado State University tried giving 10 stroke victims 30 minutes of rhythmic stimulation each day for three weeks. Compared with untreated patients, they shared significant improvements in their ability to walk steadily. People with Parkinson's disease enjoyed similar benefits. A musical beat from any genre seemed to provide a rhythmic cue, stimulating the brain's motor systems.

Other body systems seem equally responsive. Scottish researchers have found, for example, that a daily dose of Mozart or Mendelssohn significantly brightens the moods of institutionalized stroke victims. Using psychological tests, the Scottish team showed that patients receiving 12 weeks of daily music therapy were less depressed and anxious, and more stable and sociable, than other patients in the same facility. Music therapy has also proved useful in the management of Alzheimer's and other

neurological diseases. And Deforia Lane, a music therapist at University Hospitals in Cleveland, has shown that music can boost immune function in children. That's consistent with a 1995 finding by Louisiana researchers that preemies exposed to lullabies in the hospital went home earlier.

26. Which of the following would be the best title for this passage?

A. "Why Music is Powerful"

B. "Music and Pain Medication"

C. "Music and Disabled Children"

D. "The Medical Power of Music"

27. What does the passage say about Matteo?

A. He has family members who share his problem.

B. He speaks slowly and moves awkwardly.

C. He plays music better by taking the advice.

D. He's ambitious to become a professional drummer.

28. Paragraph 2 mainly tells that _____.

A. music helps pregnant women undergo contractions

B. music stimulates promotion of people's well-being

C. music seems to have therapeutic effects on all people

D. sick people benefit a lot from listening to music

29. By mentioning the Spice Girls, the author gives an example of music _____.

A. which is popular among children.

B. which is good for health.

C. which may harm one's health.

D. which is losing popularity.

30. According to the context, the word "preemies" probably means _____.

A. sick children coming to see a doctor

B. children with infectious diseases

C. newly recovered young patients

D. premature babies

Section B

Directions: For each blank in the following passage, choose the best answer from the four choices given below. Mark your choices on Answer Sheet One. Each question has only one correct answer. (10 blanks, 10 points)

Women play an increasingly significant role in cultural preservation and sustainability, particularly through entrepreneurship. Across --31-- regions and cultural contexts, women entrepreneurs are emerging as --32-- agents of cultural continuity, preserving traditional practices, knowledge, and heritage through their businesses. In sectors like tourism, women often --33-- their unique knowledge of local culture and community needs, creating ventures that go beyond financial profit to --34-- social and cultural missions. Their businesses not only provide economic opportunities for themselves and their communities but also serve as --35-- for

safeguarding cultural heritage and promoting sustainable practices.

This --36-- focus on economic development and cultural preservation highlights the --37-- for women-led enterprises to support sustainable development, cultural pride, and community resilience in both urban and rural areas. Literature on women entrepreneurship highlights the distinctive motivations, strategies, and challenges that women face, --38-- in cultural and sustainability-driven sectors. Studies indicate that women are motivated by personal success, social responsibility and pride in their culture. They often see their businesses as supporting their families and communities. However, despite their contributions, women entrepreneurs encounter --39-- gender-specific barriers, including limited access to financial resources, --40-- institutional support, and societal expectations that challenge their roles as business leaders and entrepreneurs.

31.	A. profound	B. diverse	C. conventional	D. speculative
32.	A. vital	B. transient	C. obscure	D. superficial
33.	A. divert	B. discount	C. leverage	D. undermine
34.	A. embody	B. retreat	C. compromise	D. defer
35.	A. obstacles	B. pretexts	C. constraints	D. vehicles
36.	A. ambiguous	B. fragmented	C. proportional	D. dual
37.	A. paradox	B. potential	C. precedent	D. resistance
38.	A. especially	B. despite	C. thus	D. via
39.	A. preliminary	B. subsequent	C. numerous	D. mandatory
40.	A. abundant	B. minimal	C. aggressive	D. plausible

Section C

Fill in the blanks by choosing a sentence from those (marked A, B, C, D, E, F and G) listed below. Two of the listed sentences will not be used. Mark your choices on Answer Sheet One. Each question has only one correct answer. (5 blanks, 5 points)

Through the nineteenth century, Norway became a popular destination for travellers from across Europe and beyond. Its attraction for tourists lay in its supposedly untouched and unspoilt nature. Yet, this popularity and this attraction seemed to contradict each other: how could a land full of tourists also offer an escape from the busyness of modern life? ---41--- Travellers' accounts attempted to reconcile the tensions of travel in Norway as both wild and suitably comfortable. ---42--- Norway was covered by major European guidebook series like John Murray and Baedeker from the 1860s and 1870s, with local companies like Thomas Bennett's travel agency, based in Christiania (now Oslo, Norway's capital), also publishing guides. ---43---

This article will consider one guidebook in particular: *Sunlit Norway*, first published in 1912. ---44--- Considering this text, as well as the photographs with which it is illustrated, this article will assess how the tensions of modernity were addressed and how travel guides, as well as travel more generally, created particular ideas of place and modernity. ---45--- By considering the publication of *Sunlit Norway* and its depictions of travel in Norway, as well as critically reading these against other sources, especially photography, it is possible to emphasise the influence of local actors on tourism patterns and travel writing itself.

A. In guidebooks, however, the function of attracting travellers meant that Norway

had to be carefully represented: accessible but not busy.

B. Published by Norwegian transport companies, this guide offers a particularly interesting perspective on the tension between attracting tourists with wilderness and reassuring them of comfort and infrastructure.

C. Where portraits of Norwegians are used in *Sunlit Norway*, they illustrate particular local characteristics, activities or professions.

D. These proliferated through the latter decades of the nineteenth century and into the twentieth, going through numerous editions.

E. This was a common dilemma for late-nineteenth-century travellers and took specific forms in Norway, whose appeal lay in its supposed connections to a lost past.

F. *Sunlit Norway* is particularly significant as an example of how Norwegian institutions and individuals were able to influence tourism in Norway.

G. Interestingly, British travellers in Norway had mixed feelings.

PAPER TWO 试卷二

Section A Summary Writing (10 points)

Directions: Read the following article and write a summary of between 120 and 150 words on Answer Sheet Two. You should NOT copy the original sentences.

This year, like every other year within the past couple of decades, uncountable trillions of mosquitoes will inject malaria parasites into human blood streams billions of times. Some 300 to 500 million full-blown cases of malaria will result, and between 1 and 3 million people will die, most of them pregnant women and children. That's the official figure, anyway, but it's likely to be a substantial underestimate,

since most malaria deaths are not formally registered, and many are likely to have escaped the estimators. Very roughly, the malaria death toll rivals that of AIDS, which now kills about 3 million people annually.

But unlike AIDS, malaria is a low-priority killer. Despite the deaths, and the fact that roughly 2.5 billion people (40 percent of the world's population) are at risk of contracting the disease, malaria is a relatively low public health priority on the international scene. Malaria rarely makes the news. And international funding for malaria research currently comes to a mere $150 million annually. Just by way of comparison, that's only about 5 percent of the $2.8 billion that the U.S. government alone is considering for AIDS research in the next fiscal year.

The low priority assigned to malaria would be at least easier to understand, though no less mistaken, if the threat were static. Unfortunately it is not. It is true that the geographic range of the disease has contracted substantially since the mid-20th century, but over the past couple of decades, malaria has been gathering strength. Virtually all areas where the disease is prevalent have seen drug-resistant strains of the parasites emerge—a development that is almost certainly boosting death rates. In countries as various as Armenia, Afghanistan, and Sierra Leone, the lack or deterioration of basic infrastructure has created a wealth of new breeding sites for the mosquitoes that spread the disease. The rapidly expanding slums of many tropical cities also lack such infrastructure; poor sanitation and crowding have primed these places as well for outbreaks—even though malaria has up to now been regarded as predominantly a rural disease.

What can current policy offer in the face of these threats? The medical arsenal is limited; there are only about a dozen anti-malarial drugs commonly in use, and there is significant malaria resistance to most of them. In the absence of a reliable way to kill the parasites, policy has tended to focus on killing the mosquitoes that bear them. And that has led to an abundant use of synthetic pesticides, including one of the oldest and most dangerous: dichlorodiphenyl trichloroethane, or DDT.

Section B Essay Writing (20 points)

Directions: Now China has a growing number of old people. How will this trend affect China? Use English to write an essay of at least 200 words to explain your answer. Write down your essay on Answer Sheet Two.

Write your essay on ***Answer Sheet II****.*
